

## **RADWIN's Wireless Broadband Links Chosen by Florida High Speed Internet, ISP in Florida, USA**

*RADWIN radios meet the demand for live audio & video feeds for the press during NASA launch events*

Tel-Aviv, Israel – November, 2010 - RADWIN ([www.radwin.com](http://www.radwin.com)), the global provider of Backhaul and Broadband Wireless Solutions, today announced that Florida High Speed Internet, an ISP in Central Florida, USA deployed RADWIN's solutions to provide high-capacity, reliable connectivity between its towers while continuing to expand and offering broadband solutions to its subscribers across Florida.

Scott Carullo, President of Florida High Speed Internet, stated: "In making the critical decision of what product to use to upgrade some of our backhaul links and to provide connectivity to new towers, we thoroughly researched alternative solutions to more expensive licensed backhauleds and chose RADWIN's 2000 C-Series radios. The results we have achieved meet the throughput and latency requirement of our high capacity voice-quality network. The RADWIN radios deployed transport live audio and video feeds for the press during NASA launch events. The systems overcame RF interference challenges in the noisy environment of the Space Coast and throughput jumped while network latency was reduced. Prior to using RADWIN we spent a lot of money on different solutions, but only when we put in the RADWIN equipment was the throughput we demanded achieved."

Roni Weinberg, RADWIN's COO, stated: "RADWIN's wireless broadband systems incorporate best-in-class technologies at the most competitive price, making them ideal for Cellular and IP backhauling applications. With tens of thousands of installations worldwide by leading service providers and ISPs, our solutions are empowering operators to achieve high-capacity, long range connectivity and overcome challenges such as interference, obstacles to line-of-sight and extreme temperatures."
